SMOKE THE COMPETITION!®

CLUTCH SPRING COMPRESSION TOOL (Part No. CT-100)

Compression Tool

1990 - 1997 Big Twin Adaptor

This is the adjuster that is on your bike. Thread adaptor onto this piece.

1991 to Present Sportster / Buell Adaptor

Internal Threads on Sportster Adaptor

This is the Sportster adjuster that is on your bike.

Thread our adaptor onto this piece.

Compression Nut & Washer

After the primary cover is off, thread the Adaptor onto the adjuster of your bike (these parts are circled above in RED). The Sportster will have a straight blade screw that is male, and our Adaptor will have a female with internal threads. Thread on as far as possible on the Sportster straight blade adjuster then install Compression Tool and washer, then nut. Use a 3/4" wrench and tighten down until pressure is off the snap ring. You may have to use another wrench on the hex body of the Adaptor so it does not spin. Compress spring just enough to remove snap ring. Reverse the process to re-install spring.

Always refer to your owner's manual or factory service manual for torque specs and oils. If you have any questions, feel free to give us a call at (562) 404-5200.
